WinSystems’ PCM-CAN-1 is a PC/104-compliant, Controller Area Network (CAN) peripheral module. This board uses a NXP SJA-1000 CAN controller IC with advanced features for use in automotive and industrial applications. This board is also available in a dual channel version, called the PCM-CAN-2.

CAN is a serial, asynchronous, multi-master communication protocol for connecting electronic control modules, sensors and actuators in automotive and industrial applications. The signal is encoded in a non-return-to-zero (NRZ) pattern and is sensed by all nodes. The CAN bus physical interface is similar to RS-485 two-wire, half-duplex communications.

On CAN bus systems, signal integrity is achieved by matching the impedance of the transmission line and thereby minimizing reflections. A jumper selectable, onboard 120 ohm resistor is provided for this purpose.
I/O Connectors - The CAN channel has its signal and power wired to two 10-pin 0.100 inch right angle headers, which allow endpoint or daisy chain connection. The optional WinSystems’ cable, CBL-123-G-1-1.0, extends and converts it to a 9-pin D-sub type male connector to connect to the control area network.

PC/104 Interface - The PCM-CAN-1 is I/O mapped and the CAN controller occupies either 32 or 128 adjacent I/O registers depending on CAN 2.0A (BasicCAN) or CAN 2.0B (PeliCAN) mode selection. The base address and mode is jumper selectable. The CAN controller has a single user configurable interrupt, which is also jumper selectable for IRQ 3-7, 9-12, 14, or 15.

Software - The PCM-CAN-1 supports Linux, Windows XPe, and WES7. Drivers are available on our website.

Isolated Configuration - WinSystems offers a version of this board populated with high-speed isolated couplers and transformer isolated power supplies called the PCM-CAN-1-ISO. The CAN channel can supply isolated 5VDC power to the respective interface or take isolated 5-12VDC power from the interface. The channel has an independent on-board isolated +5VDC power supply and jumper connections for providing power to or receiving power from the CAN interface connectors. The channel can provide up to 150mA of 5VDC power to the CAN interface or alternately accept power in the range of 5-12VDC from the interface. The power supply has overvoltage, overcurrent, and short circuit protection.

Custom Configurations - WinSystems offers additional custom configurations for OEMs. Please contact an Applications Engineer to discuss your specific requirements.

Technical Specifications

**Electrical**
- CAN Controller: NXP SJA-1000
- CAN Data Rate: 1 Mbps

**Power**
- Vcc: ±5% @ 250mA

**Connectors**
- PC/104: 16-bit stackthrough (feed through only)
- CAN: 10-pin right angle 0.100” headers

**Environmental**
- Operational from -40°C to +85°C
- RoHS compliant

**Mechanical**
- Dimensions: 3.6 x 3.8 inches (90 x 96mm)
- Weight: 2.1 oz. (60 gm)
- PC board: 0.078 inches, four layer FR4

**Ordering Information**
(See website for complete ordering information and accessories.)

- PCM-CAN-1 PC/104 single channel non-isolated CAN card
- PCM-CAN-2 PC/104 dual channel non-isolated CAN card
- PCM-CAN-1-ISO PC/104 single channel isolated CAN card
- PCM-CAN-2-ISO PC/104 dual channel isolated CAN card

**Accessories**
- CBL-123-G-1-1.0 10-pin header to 9-pin male D-sub cable
